

RAJEEV UPADHYAY

Engineering Manager | Senior Technical Consultant

Reading, UK | +44-7442594132 | rajeev.up15@gmail.com | [linkedin.com/in/rajeev-upadhyay](https://www.linkedin.com/in/rajeev-upadhyay)

SUMMARY

Engineering Manager with 14+ years of experience leading engineering teams and building customer-facing products across full-stack, cloud and AI-enabled platforms.

Experienced in developing engineers into independent problem solvers, helping teams understand the problems they are solving, and creating environments where engineers can make strong technical decisions with autonomy.

Strong technical foundation across full-stack engineering, distributed systems, API-driven architectures, cloud platforms and modern web technologies, with hands-on experience across React, Node.js, TypeScript, PostgreSQL and Redis.

Experienced in leading 10+ engineer squads, partnering with Product Managers on outcomes and OKRs, and improving engineering reliability, delivery velocity and time-to-market.

CORE COMPETENCIES

- Engineering leadership, coaching and mentoring, career development, performance feedback and team building
- Technical leadership across cloud-native and distributed systems, system design, debugging and prototyping
- Product partnership, OKRs, MVP development and outcome-driven engineering execution
- Engineering excellence: observability, testing, developer productivity and AI-assisted development

PROFESSIONAL EXPERIENCE

Engineering Manager / Senior Technical Consultant

2016 - Present

Infosys Limited, London, United Kingdom / Pune, India

Lead and develop engineering squads delivering customer-facing products and enterprise platforms, combining people leadership with technical and product engagement.

People & Engineering Leadership

- Lead and develop 10+ engineer squads, creating an environment where engineers can take ownership of complex problems and make informed technical decisions
- Coach engineers through regular 1:1s, structured feedback, career development and stretch opportunities, helping individuals grow into increasingly independent engineers
- Build team environments centred on ownership, autonomy and continuous improvement, rather than relying on process to drive delivery
- Encourage engineers to challenge assumptions, improve existing approaches and take responsibility for outcomes
- Partner with senior engineers on technical decisions while ensuring teams retain ownership of implementation and delivery

Technical Leadership

- Provide technical leadership across cloud-native and distributed systems, working with senior engineers on architecture, scalability, resilience, API integration and long-term maintainability
- Remain technically engaged in complex problems, providing hands-on guidance across application architecture, debugging and solution development
- Established engineering standards and testing practices that contributed to approximately 40% reduction in system downtime and increased confidence in production releases
- Championed observability, AI-assisted development and developer productivity initiatives to improve engineering effectiveness
- Balance technical quality with pragmatic delivery, helping teams make appropriate trade-offs without over-engineering solutions

Product & Engineering Partnership

- Partner with Product Managers to define squad OKRs, shape roadmaps and translate business problems into measurable engineering outcomes
- Help engineers understand the customer and business context behind their work, enabling stronger technical decisions
- Lead initiatives from MVP through production, achieving approximately 25% reduction in time-to-market through end-to-end ownership and cross-functional execution
- Encourage experimentation and phased delivery to validate ideas before committing to broader production rollout
- Collaborate with Product and engineering teams to simplify solutions, improve quality and deliver value incrementally

Technology Lead

2010 - 2016

Zensar Technologies Limited, Pune, India

- Led engineering squads delivering web applications, with accountability for team capability, technical quality and delivery outcomes
- Provided hands-on technical leadership across web application development and engineering architecture
- Partnered with Product Managers to shape engineering roadmaps and translate product requirements into scalable technical solutions
- Established quality and release practices that improved application reliability and scalability
- Mentored junior and mid-level engineers through technical guidance, structured feedback and career development
- Helped build sustained engineering capability through knowledge sharing and collaborative problem solving

INNOVATION INITIATIVES

Ecolite - Sustainability & Tracking MVP

- Helped turn a sustainability tracking opportunity into a working MVP, moving from problem definition through solution design and implementation
- Mentored two engineers/trainees, giving them meaningful ownership while providing hands-on technical guidance and feedback
- Helped shape product scope, prioritise functionality and make pragmatic technical decisions within MVP constraints
- Used the initiative as an opportunity to develop less-experienced engineers through real product ownership rather than task-based delivery

SAGent - SEO, GEO & AEO Intelligence Platform

- Conceived and built an independent product that analyses websites across SEO, Generative Engine Optimisation (GEO) and Answer Engine Optimisation (AEO)
- Designed the product around analysing website readiness and generating actionable recommendations, rather than simply reporting scores
- Took the idea from problem definition through product design, system design and hands-on implementation
- Explored how AI can turn complex website analysis into practical recommendations for improving visibility across search and AI-driven discovery
- Rapidly prototyped and iterated using modern web technologies and AI-assisted engineering

SELECTED IMPACT

- ~40% reduction in system downtime through stronger engineering standards, testing, release practices and reliability improvements
- ~30% improvement in squad delivery velocity through Agile delivery optimisation, OKR-aligned planning and streamlined engineering workflows
- ~25% reduction in time-to-market through end-to-end ownership of enterprise initiatives and cross-functional execution

- Built and developed high-performing engineering squads through coaching, continuous feedback and an ownership-driven engineering culture

TECHNICAL SKILLS

Engineering Leadership: Engineering Management, Coaching & Mentoring, Career Development, Performance Feedback, Engineering Culture, Team Building

Technical: TypeScript, JavaScript, React, Node.js, Next.js, PostgreSQL, Redis, REST APIs, Distributed Systems, API Design, System Design, Scalability, Reliability

Product & Engineering: Product Partnership, MVP Development, Technical Discovery, OKRs, Experimentation, Outcome-Driven Development, Cross-Functional Engineering

Engineering Excellence: Observability, Testing, Developer Productivity, AI-Assisted Development, Generative AI, Engineering Standards, Continuous Improvement

Cloud & Platforms: AWS, Azure, Contentful, Adobe Experience Manager, Salesforce, Identity Platforms

CERTIFICATIONS

- Contentful Certified Professional
- AWS Cloud Practitioner
- Microsoft Certified Professional Developer
- Azure AI Essentials - Microsoft
- Generative AI Essentials - Microsoft
- IBM AI Fundamentals
- Back End Development & APIs - freeCodeCamp
- Front End Libraries (React/jQuery/Bootstrap) - freeCodeCamp
- Agile Project Management - PMI
- Certified Scrum Associate
- Agile Practitioner
- Predictive Project Management - PMI

EDUCATION

B.Tech. - Computer Science & Engineering

SRM University, Chennai | 2010

Postgraduate Diploma - Business Management

Indira Gandhi National Open University, New Delhi | 2015
